Abstract

PURPOSE: To provide a delivery system for an electronic mail capable of taking out a reception message even after delivery of the electronic mail by providing a means which preserves it in a mail box after the reception message has been delivered at an extension terminal.

CONSTITUTION: The reception message from a line wire facsimile terminal 10 is stored by accumulating in the mail box of an electronic mail system 60 classified by every address of the message. After that, corresponding messages are delivered to the extension terminals 20, 30 in accordance with the addresses of the messages. When corresponding extension terminals 20, 30 are busy, the reception message can be retried afterward. Also, the reception message in the mail box can be taken out from another extension terminal. The reception messages are preserved in the mail box even after they are delivered to the extension terminals 20, 30. Therefore, the message can be taken out any number of times by making access a corresponding mail box in the system 60 from the extension terminals 20, 30.
